About

My background is in visual art, which naturally led me to interface design and front-end development.

What excites me most today is the ability to turn ideas directly into working products. Modern AI has made that process much more accessible, allowing design and development to become part of the same creative workflow.

My work combines visual design, front-end development and AI to create web and mobile experiences that are simple, useful and visually refined.

Skills

AI-assisted Development/UI Engineering/
Front-End Development/Mobile UI Development/
Responsive Design/Component Architecture/Design Systems/Visual Design/Interaction Design
/Accessibility/Git Workflow

Technologies

React / Next.js / TypeScript / JavaScript / HTML5 / CSS3/Git / GitHub / Vercel/ ChatGPT / Codex / Claude Code / Photoshop / Illustrator / Xcode
